

DORAN 360M™ TECHNICAL BULLETIN

BMW Motorcycles

The Doran 360M™ Tire Pressure Monitoring System for Motorcycles is compatible with most BMW Motorcycles.

However, a number of models utilize a valve stem machined into the spoke of the front wheel. The Doran 360M™ is only compatible with ONE of these models [K1200GT]. On all other models, when the wireless sensor of the Doran system is installed on the valve stem, it will come into contact with the brake caliper when the tire spins. Due to the design of the valve stem / rim / spoke, it is not possible to install the sensors inside the tire/rim using the Doran 90degree or Straight valve stems.

The Doran 360M™ is **NOT COMPATIBLE** with the following models of BMW Motorcycles:

R1200R

R1200RT

F800ST

K1200R

K1200S
