New Doran 360RV™ Tire Pressure Monitoring System Features “Green Means GOOD” Indicator for Ease of Use

Cincinnati, OH – The new Doran 360RV™ Tire Pressure Monitoring System provides the driver “at-a-glance” status updates with a new patent pending Green Means GOOD™ indicator. The unique system monitors up to 36 tires for RV, trailer and tow-vehicle applications. The driver is also alerted through multiple alarms (audible, location, pressure, and warning symbol) so that low-tire-pressure problems can be addressed and costly breakdowns and repairs are eliminated. The system costs just 50-80% of an average incident – meaning that it could pay for itself the first time that a low-pressure problem is avoided.

Additionally, a patent-pending “sleep” mode ensures that the RV stays protected at all times. With this unique feature, tire-pressure is monitored, but potential warnings are withheld until the driver awakes in the morning.

Installation can be accomplished without any special tools in about an hour, leaving no external antennas or exposed wires. A simple to understand and operate LCD screen display comes equipped with 4-way navigational buttons. Gold-plated heavy-duty truck-tested sensors deliver the longest life and corrosion resistance on the market. Sensor batteries last 20% longer than competitive models. Multiple mounting options including an adjustable pedestal and a visor clip/hook and loop fastener bracket, allows the LCD screen to be mounted virtually anywhere. The Doran 360RV™ is ideal for RVs of all sizes and configurations, including fifth-wheels. All products are backed by a 30-day money back guarantee.

“The Doran 360RV™ was designed – from the ground up – to be the most versatile and easiest to use tire pressure monitoring system for RV’s available” says General Manager Jim Samocki. “We’ve incorporated many of the ideas and suggestions from RV enthusiasts to provide a solution that provides peace-of-mind at an affordable price. Our patent-pending ‘sleep mode’ is just one example of user-friendly improvements that we’ve designed into the Doran 360RV™.”

Recent studies indicate that 90% of tire failures are caused by low tire inflation. Tires which were properly inflated just hours ago may be problematic due to changes in weather alone. This can lead to poor handling and braking, uneven tire wear, premature tire wear, blowouts and expensive breakdowns. The Doran 360RV™ eliminates these concerns by consistently checking tire pressure automatically and providing drivers with the peace-of-mind that comes from knowing their family and investment is safe.

Cincinnati based Doran Manufacturing has been the leading safety monitor manufacturer for over 35 years. In addition to tire pressure monitoring systems, they supply LED and incandescent Exterior Light Monitors, Sleeping Child Checks, Emergency Exit Monitors and a full range of LED lighting products.
