

!!WARNING!!

**READ THE FOLLOWING AND INSTALL CAREFULLY
SO THAT WARRANTY IS NOT VOIDED**

ONLY INSTALL SENSORS ON METAL VALVE STEMS. When placing sensors on valve stems be sure that there is adequate clearance between the sensor and any object or surface. If clearance is an issue, have a professional install the enclosed patent pending metal stems in order to attach sensors to the outside of the wheel (if room is available). The other option is to have a professional install the sensors on the inside of the wheel according to the instructions. Damaged sensors that show any signs of contact with an object or surface or other physical abuse will void the warranty of the sensor.
