An advanced fleet
management solution
with integrated tire
pressure and
temperature data for
your fleet.

Doran Connect 360™ provides fleet management with actionable data for planning, decision making and predictive maintenance.

This platform includes advanced tracking features, vehicle performance and real-time pressure & temperature data for every tire on every vehicle in the fleet.

- Real-time asset tracking
- Real-time tire pressure alerts
- Real-time tire temperature alerts
- TPMS automated reports
- TPMS alert email notifications

- Trip insights
- Driving metrics
- Data backup for 12 months
- Access to TPMS historical data to create custom applications or reports

The Importance of Monitoring Tire Pressure & Temperature

Maintaining proper tire inflation pressure maximizes the performance of the tire leading to reduced downtime while improving efficiency & safety.

Doran tire monitoring systems help to reduce tire related repair & maintenance costs, prevent roadside tire replacements, extend tread life, protect casings and minimize catastrophic tire failures.

Doran tire pressure & temperature monitoring systems are designed to handle the extreme environmental conditions found on roadways across the nation, taking into account heat, moisture, and the longevity needed for performance on the road.

Doran Connect 360™ takes important tire data from the asset to fleet management anytime, anywhere.

How It Works

Valve stem mounted tire pressure sensor

Doran 360™ tire pressure monitoring systems continuously monitor pressure and temperature with external, valve stem mounted sensors. This data passes through the Doran Connect ECU monitor and gateway for remote visibility.

Multiple receiving module options are available for in cabin visibility of inflation pressure, critical high temperature and low pressure events.
